## **Standard Handbook for Telescope Making 1984**

describes different types of telescopes explains how to set up a workshop and build an observatory and discusses recent developments in celestial photography

## ***Handbook for Telescope Making 1975***

this book provides an introduction to the design of a variety of telescopes mounts and drives suitable for the home constructor projects include instruments that range from a shoestring budget to specialist devices that are not commercially available the skill level of each project is indicated and advice is provided as to what is sensible to construct given what is commercially available hints and tips are included as well as listings of reputable mail order sources of materials and components

## **Amateur Telescope Making 2012-12-06**

explains every stage and procedure of constructing a simple reflecting telescope from grinding the mirror to mounting the finished instrument and discusses simple refracting and larger reflecting models

## **Amateur Telescope Making 1956**

building an astronomical telescope offers the amateur astronomer an exciting challenge with the possibility of ending up with a far bigger and better telescope than could have been afforded otherwise in the past the starting point has always been the grinding and polishing of at least the primary mirror a difficult and immensely time consuming process but now that the internet has brought us together in a global village purchasing off the shelf goods such as parabolic mirrors eyepieces lenses and telescope tubes is possible there are also a vast number of used mirrors and lenses out there and it is now possible to track them down almost anywhere in the world online stores and auction houses have facilitated commerce regarding all sorts of useful optical components at a reasonable price this is a book about making telescopes from available parts it provides guidance on where to look and what to look for in selecting items useful for telescope making and explains how to assemble these components to produce an excellent instrument on a tight budget at one time many amateurs made their own telescopes from home made parts in today's rushed world that has almost become a lost art the internet offers a wonderful alternative to either buying a pricey scope fully assembled or making your own from scratch

## ***Amateur Telescope Making 1950***

provides information on amateur telescope making includes a photo gallery a faq section and a list of related books and vendors links to related sites

## **Beginner's Guide to Astronomical Telescope Making 1975-01-01**

presents information for amateurs building telescopes provided by berthold hamburger includes instructions for making screens mirrors and telescopes offers photographs of telescopes

## ***Advanced Telescope Making Techniques: Optics 1986***

complete detailed instructions and numerous diagrams for constructing a do it yourself telescope no complicated mathematics are involved and no prior knowledge of optics or astronomy is needed to follow the text's step by step directions contents cover among other topics materials and equipment tube parts and alignment eyepieces and related problems setting circles and optical principles 1973 ed appendixes index 6 plates 100 figures

## **Handbook for Telescope Making 1962**

the process is described in great detail so that the making of the mirror is an enjoyable and relaxing task simple test methods are described so that you do not over grind the mirror but achieve the correct shape how to simply mount the mirror in a tube is then covered in detail the result will be a working astronomical telescope capable of viewing the heavens only everyday tools are required throughout page 4 of cover

## **Amateur Telescope Making in the Internet Age 2010-10-14**
