the risk of athletes sustaining concussion while participating in professional team sports raises two serious concerns both nationally and internationally first concussion in sport carries a public health risk given that injured athletes may have to deal with significant long term medical complications with some of the worst cases resulting in chronic traumatic encephalopathy cte secondly sports governing bodies are now exposed to the risk of financial and reputational damage as a consequence of legal proceedings being filed against them a good example of this among many other recent examples is the case of the united states of america s national football league nfl the governing body for american football which in 2015 committed to pay us 1 billion to settle the class action filed by its former professional players this book examines how to most efficiently reduce these public health and legal risks and proposes a harmonised solution across sports and legal systems

structuring sense explores the difference between words however defined and structures however constructed it sets out to demonstrate over three volumes that the explanation of linguistic competence should be shifted from lexical entry to syntactic structure from memory of words to manipulation of rules its reformulation of how grammar and lexicon interact has profound implications for linguistic philosophical and psychological theories about human mind and language hagit borer departs from language specific constructional approaches and from lexicalist approaches to argue that universal hierarchical structures determine interpretation and that language variation emerges from the morphological and phonological properties of inflectional material taking form the third and final volume of structuring sense applies this radical approach to the construction of complex words integrating research in syntax and morphology the author develops a new model of word formation arguing that on the one hand the basic building blocks of language are rigid semantic and syntactic functions while on the other hand they are roots which in themselves are but packets of phonological information and are devoid of both meaning and grammatical properties of any kind within such a model syntactic category syntactic selection and argument structure are all mediated through syntactic structures projected from rigid functions or alternatively constructed through general combinatorial principles of syntax such as chomsky s merge the meaning of words in turn does not involve the existence of lexemes but

rather the matching of a well defined and phonologically articulated syntactic domain with conceptual content itself outside the domain of language as such in a departure from most current models of syntax but in line with many philosophical traditions then the exo skeletal model partitions meaning into formal functions on the one hand and content on the other hand while the former are read off syntactico semantic structures as is usually assumed content is crucially read off syntactico phonological structures

this book originated from my publisher's request for a new concise account of PVC plastics in terms of their nature properties processing and applications there is thus inevitably an extensive thematic overlap with my still relatively recent PVC technology 4th edition and I have drawn liberally on that source for a substantial amount of relevant basic material however the present book is by no means merely an abridgement of the earlier one whilst indeed considerably shorter it is not only comparable in scope and general coverage of the subject but also contains much new information I have made a point of again strongly

featuring the numerous standards relevant and in many cases cardinal to the testing and characterisation of pvc materials and products and to the evaluation of their properties and performance these standards are an indispensable part of the technology of pvc plastics and nobody concerned with any aspect of this complex subject should fail to recognise that fact it is ever a pleasure to express appreciation and thanks where they are due i am grateful to dipl ing h e luben of brabender ohg duisburg frg not only for the up to date information he provided on brabender equipment but also most particularly for his exceptionally friendly helpful attitude in all our contacts and for the trouble he took to make some illustrations and figures available in the form convenient for direct reproduction
