Development Planning 1971 over the next 20 years most low income countries will for the first time become more urban than rural understanding demographic trends in the cities of the developing world is critical to those countries their societies economies and environments the benefits from urbanization cannot be overlooked but the speed and sheer scale of this transformation presents many challenges in this uniquely thorough and authoritative volume 16 of the world s leading scholars on urban population and development have worked together to produce the most comprehensive and detailed analysis of the changes taking place in cities and their implications and impacts they focus on population dynamics social and economic differentiation fertility and reproductive health mortality and morbidity labor force and urban governance as many national governments decentralize and devolve their functions the

nature of urban management and governance is undergoing fundamental transformation with programs in poverty alleviation health education and public services increasingly being deposited in the hands of untested municipal and regional governments cities transformed identifies a new class of policy maker emerging to take up the growing responsibilities drawing from a wide variety of data sources many of them previously inaccessible this essential text will become the benchmark for all involved in city level research policy planning and investment decisions the national research council is a private non profit institution based in washington dc providing services to the us government the public and the scientific and engineering communities the editors are members of the council s panel on urban population dynamics

Decisions and Orders of the National Labor Relations Board 1969 stephen smith s case studies connects real economic development problems with theoretical concepts and offers students an accessible and interesting presentation of material within each case opposing viewpoints are presented in a balanced way fueling student discussion and stimulating debate although it can be used with any economic development text this supplemental text is an ideal companion to michael todaro s economic development 7 e

Cities Transformed 2013-10-31 aging and cancer may be manifestations of genetic or epigenetic changes in somatic cells through research laboratory analysis of these related processes has become possible cells can be removed from the body kept warm in laboratory glassware nourished by artificial solutions and studied for years or even decades two types of cultures have emerged primary cultures grown from cells obtained directly from living animals may grow well for generations but ultimately cease to divide established cultures on the other hand may grow and divide indefinitely it is a striking fact that most if not all established cultures consist of cells that are heteroploid having an abnormal chromosome complement that may include structural rearrangements as well as abnormalities of chromosome number most established cultures are also neoplastic on behavior and morphology in this they resemble cancers and established cultures are in fact often grown from cancer cells interest in the role of chromosomes in neoplasia has recently been overshadowed by an emphasis on tumor viruses this book should reawaken the former interest it will also arouse new interest in the role of epigenetic mechanisms of animal cells in contrast to the classic genetic processes as dr john littlefield writes the relationship between the overcoming of senescence the appearance of heteroploidy and the acquisition of neoplastic qualities is not yet clear but it is of such great theoretical and practical importance as to demand attention and new ideas

Case Studies in Economic Development 1997 the biology of animal viruses second edition deals with animal viruses focusing on molecular biology and tumor virology the book reviews the nature chemical composition structure and classification of animal viruses the text also describes the methods of isolating animal viruses how these are grown in the laboratory assayed purified and used in biochemical experiments the book also describes the structure and chemistry of many known viruses such as the papovaviridae herpes virus poxvirus coronavirus or the bunyamwera supergroup the book then explains the structure and function of the animal cell including the cytoplasmic organelles the nucleus inhibitors of cell function and viral multiplication other papers discuss in detail the multiplication of the dna and rna viruses whose mechanisms of multiplication differ from those of other viruses other papers discuss the known prevention and treatment methods of viral diseases as well as the epidemiology and evolution of viral diseases resulting from human s

disturbance of the biosphere and from medical and experimental innovations the text can prove useful for immunologists veterinarians virologists molecular researchers students and academicians in the field of cellular microbiology and virology

Technical Bulletin 1976 predictive drug testing on human tumor cells in order to define the appropriate chemotherapy will remain imperative as long as the anticancer agents available are few in number and show only limited activity the advantages of an effective test would lie in obviating the need for testing antineoplastic agents on large cohorts of patients for assessment of drug activity phase ii studies and in allowing determination of optimal use of anticancer agents phase iii trials such an in vitro test could help to better define dose and schedule of drugs preclinically the additive value of individual drugs could be determined on tumor cells in vitro in order to define the best combination chemotherapy in vivo test directed therapy would avoid unnecessary drug related morbidity in patients with refractory tumors chemotherapy treatment would be more than justified even with side effects if palliation or even prolonged survival could be anticipated as a result the benefits of predictive drug testing on human tumor cells would extend beyond improvement of individual patient treatment if the testing helped to identify new active agents this spectrum of benefits to the entire field of oncology provides tremendous motivation for the development of such testing although a number of chemosensitivity tests have been proposed since the advent of modern anticancer chemotherapy interest has been renewed by the possibility of cloning human tumor cells on agar plates with a view to testing drug activity on cells with high proliferation capacity

Variation, Senescence, and Neoplasia in Cultured Somatic Cells 1976 long established as the leading textbook on migration and used by students and scholars alike all over the world this fully revised and updated sixth edition continues to offer an authoritative and cutting edge account of migration flows why they occur and their consequences for both origin and destination societies international migration is one of the most emotive issues of our times reforging societies around the world and shaping debates on security national identity and sovereignty in profound ways the expert authors of this book provide a truly global and interdisciplinary introduction to this perennially important topic with chapters covering all of the world's regions and spanning the nineteenth century to the present day exploring the significance of migration in relation to recent events and emerging trends from the policies of the european union to the great recession this text helps to shed light on the often large gap between the rhetoric and realities of migration for students of migration studies in disciplines as wide ranging as politics sociology geography area studies anthropology and history this is an indispensable guide whether already familiar with the subject matter or approaching the topic for the first time new to this edition charts the contemporary politics of migration including the latest statistical data summary of policy developments and shifts toward anti immigrant politics and islamophobia a brand new chapter on categories of migration used to describe migrants and analyse migration including a discussion on the topical issue of climate refugees extended discussion of the impacts of migration and development in origin countries in a new separate chapter at the end of the book improved coverage of migration trends in the former soviet union and eastern europe and central asia offers a better balance between western and non western regions and perspectives on migration draws on up to date global data on migration and migration policies a migration policy toolbox providing a comprehensive overview of different types of migration policies a new glossary with definitions of key terms in migration which are also highlighted throughout the text accompanying online
