master's thesis from the year 2004 in the subject business economics controlling grade a university at albany state university of new york 15 entries in the bibliography language english abstract in order to do justice to the increased requirements on project and business controlling there is a need for a systematic approach tailored to the corporation involved many corporations have been shown to prioritize improvement measures insufficiently if at all despite increased requirements on the economic viability of projects since resources are limited in all companies improvement measures with the highest relative output should be given preference the usual methods used up to now have been either inappropriate or are no longer sufficient the value analyzer is a method supported tool for estimating the expected improve ment of key performance indicators as a part of a general improvement in corporate performance this makes it easy to focus on worthwhile measures and supports a general economic calculation to base a go no go decision on before the start of an implementation project based on general key performance indicators specific scenarios can be created and then altered and or simulated by changing the parameters or factors of influence this is all based on a three level principle in the calculation model definition of a primary goal kpi key performance indicator for example inventory level breakdown into part goals kpi elements performance indicator element for example finished products inventory level determination of appropriate measures for improving the part goal in the calculation of business scenarios that follows the exact impact of enablers and the optimal

although proving is core to mathematics as a sense making activity it currently has a marginal place in elementary classrooms internationally blending research with practical perspectives this book addresses what it would take to elevate the place of proving at elementary school the book uses classroom episodes from two countries to examine different kinds of proving tasks and the proving activity they can generate in the elementary classroom it examines further the role of teachers in mediating the relationship between proving tasks and proving activity including major mathematical and pedagogical issues that arise for teachers as they implement each kind of proving task in addition to its contribution to research knowledge the book has important implications for teaching curricular resources and teacher education

areader who achieves a substantial command of the material con tained in this book should be able to read with understanding most of the literature in the field possible exceptions may be certain special aspects of the subject such as the aeroelasticity of plates and sheils or the use of electronic feedback control to modify aeroelastic behavior the first author has considered the former topic in aseparate volume the latter topic is also deserving of aseparate volume in the first portion of the book the basic physical phenomena of divergence control surface effectiveness flutter and gust response of aeronautical vehicles are treated as an indication of the expanding scope of the field representative examples are also drawn from the non aeronautical literature to aid the student who is encountering these phenomena for the first time each is introduced in the context of a simple physical model and then reconsidered systematically in more complicated models using more sophisticated mathematics
