popular science and our readers share the future is going to be better and science and technology are the driving forces that will help make it better light and heavy vehicle technology fourth edition provides a complete text and reference to the design construction and operation of the many and varied components of modern motor vehicles including the knowledge needed to service and repair them this book provides incomparable coverage of both cars and heavier vehicles featuring over 1000 illustrations this new edition has been brought fully up to date with modern practices and designs whilst maintaining the information needed to deal with older vehicles two entirely new sections of the book provide a topical introduction to alternative power sources and fuels and battery electric hybrid and fuel cell vehicles more information on the latest developments in fuel injection diesel engines and transmissions has also been added an expanded list of technical abbreviations now contains over 200 entries a useful resource for professional technicians in their day to day work this book is an essential textbook for all students of automotive engineering particularly on imi c g 4000 series and btec courses and provides all the underpinning knowledge required for nvqs to level 3 by bridging the gap between basic and more advanced treatments of the subject it also acts as a useful source of information for experienced technicians and technically minded motorists and will help them to improve their knowledge and skills total car care is the most complete step by step automotive repair manual you ll ever use all repair procedures are supported by detailed specifications exploded views and photographs from the simplest repair procedure to the most complex trust chilton s total car care manual covers all u s and canadian models of nissan sentra and pulsar the process of fuel injection spray atomization and vaporization charge cooling mixture preparation and the control of in cylinder air motion are all being actively researched and this work is reviewed in detail and analyzed the new technologies such as high pressure common rail gasoline injection systems and swirl atomizing gasoline fuel injections are discussed in detail as these technologies along with computer control capabilities have enabled the current new examination of an old objective the direct injection stratified charge disc gasoline engine the prior work on disc engines that is relevant to current gdi engine development is also reviewed and discussed the fuel economy and emission data for actual engine configurations have been obtained and assembled for all of the available gdi literature and are reviewed and discussed in detail the types of gdi engines are arranged in four classifications of decreasing complexity and the advantages and disadvantages of each class are noted and explained emphasis is placed upon consensus trends and conclusions that are evident when taken as a whole thus the gdi researcher is informed regarding the degree to which engine volumetric efficiency and compression ratio can be increased under optimized conditions and as to the extent to which unburned hydrocarbon ubhc nox and particulate emissions can be minimized for specific combustion strategies the critical area of gdi fuel injector deposits and the associated effect on spray geometry and engine performance degradation are reviewed and important system guidelines for minimizing deposition rates and deposit effects are presented the capabilities and limitations of emission control techniques and after treatment hardware are reviewed in depth and a compilation and discussion of areas of consensus on attaining european japanese and north american emission standards presented all known research prototype and production gdi engines worldwide are reviewed as to performance emissions and fuel economy advantages and for areas requiring further development the engine schematics control diagrams and specifications are compiled and the emission control strategies are illustrated and discussed the influence of lean nox catalysts on the development of late injection stratified charge gdi engines is reviewed and the relative merits of lean burn homogeneous direct injection engines as an option requiring less control complexity are analyzed complete chapter on
