

QUESTION: A 45-year-old male with a long history of alcohol abuse presents with a 2-week history of progressive weakness and weight loss. He has a history of chronic hepatitis B. Physical examination shows a sclerotic cornea, a spider angioma on the chest, and a palpable spleen tip. Laboratory studies show a total bilirubin of 2.5 mg/dL, a prothrombin time of 18 seconds, and an albumin of 2.8 g/dL. Which of the following is the most likely diagnosis?

D-HELLP

1996-12-11

ANSWER: D. HELLP syndrome is a life-threatening complication of pregnancy characterized by hemolysis, elevated liver enzymes, and low platelets. The patient's history of alcohol abuse and chronic hepatitis B, along with the physical findings of sclerotic cornea, spider angioma, and splenomegaly, are consistent with cirrhosis. The laboratory findings of elevated bilirubin, prolonged PT, and low albumin are also consistent with cirrhosis.
