administered through a nose tube cannula a mask or a tent the extra oxygen is breathed in along with normal air this book is a concise guide to oxygen therapy for clinicians and trainees divided into four sections the text begins with an overview of the basic facts of oxygen describing the different types and their individual uses in clinical therapy section two discusses the physiology and monitoring of oxygen therapy and section three covers different devices and delivery systems and oxygen toxicity lung damage from breathing in too much extra oxygen the final section examines oxygen targets in disease specifics how the therapy works and the effects of hypoxia low oxygen levels in body tissues and hypoxemia low oxygen levels in the blood this book provides readers with a clear description of the types of lunar and interplanetary trajectories and how they influence satellite system design the description follows an engineering rather than a mathematical approach and includes many examples of lunar trajectories based on real missions it helps readers gain an understanding of the driving subsystems of interplanetary and lunar satellites the tables and graphs showing
