Foot and Ankle Innovations in Latin America, An Issue of Foot and Ankle Clinics - E-Book

2012-10-01

this issue of the foot ankle clinics focuses exclusively on advances being made in latin america in an effort to include more surgeons from latin america who are major contributors to the literature and give them an opportunity to share ideas the issue will cover new techniques and advances from major doctors academics and institutions in colombia venezuela brazil argentina and chile

Spectral Gamma-ray Logging Studies

1981

this volume is a sequel to manis valuation and prüfer extensions i lnm1791 the prüfer extensions of a commutative ring a are roughly those commutative ring extensions r/a where commutative algebra is governed by manis valuations on r with integral values on a these valuations then turn out to belong to the particularly amenable subclass of pm prüfer manis valuations while in volume i prüfer extensions in general and individual pm valuations were studied now the focus is on families of pm valuations one highlight is the presentation of a very general and deep approximation theorem for pm valuations going back to joachim gräter s work in 1980 a far reaching extension of the classical weak approximation theorem in arithmetic another highlight is a theory of so called kronecker extensions where pm valuations are put to use in arbitrary commutative ring extensions in a way that ultimately goes back to the work of leopold kronecker

Catalogue of the Public Documents of the [the Fifty-third] Congress [to the 76th Congress] and of All Departments of the Government of the United States

1896

the authors consider a schrödinger operator $h \Delta v x$ in dimension two with a quasi periodic potential $v x$ they prove that the absolutely continuous spectrum of h contains a semiaxis and there is a family of generalized eigenfunctions at every point of this semiaxis with the following properties first the

eigenfunctions are close to plane waves $e^{i \mathbf{x} \cdot \mathbf{x}}$ in the high energy region second the isoenergetic curves in the space of momenta \mathbf{x} corresponding to these eigenfunctions have the form of slightly distorted circles with holes cantor type structure a new method of multiscale analysis in the momentum space is developed to prove these results the result is based on a previous paper on the quasiperiodic polyharmonic operator $\Delta^l v(\mathbf{x}) = 1$ here the authors address technical complications arising in the case $l = 1$ however this text is self contained and can be read without familiarity with the previous paper

Inventory of Federal Archives in the States

1937

sir roger pratt's rules for the guidance of architects written on 7 december 1665 included the following statements which embody succinctly the principles of the specification of building works and indeed of contract administration and are as true today as they were nearly 350 years ago to determine anything without due premeditation is rashness not to come to any determination in a convenient time is an effect either of ignorance or sloth to wittingly omit to do that at the first which at last we shall be forced to at our greater disadvantage is the extremity of folly to be so forward in premeditation as to make no trade at a stand for want of direction which will cause great repining etc and to be careful to see them exactly performed for otherwise all trades will be at catch with him to contrive all things with the most orderly thrift and longest duration however pratt seems to have relied on entrusting the works to known competent workmen rather than incorporating these wise principles in a written specification this method of working appears to have continued until the rise of the general contractor in the nineteenth century when a written specification became an essential part of the design process the specification was needed to describe the materials to be used and ways of working them and to ensure comparability of tenders particularly for public works this encouraged books on specifications starting with alfred bartholomew's specifications for practical architecture in 1840 revised in 1846 it began with a long essay on the decline of excellence in the structure and in the science of modern english buildings with the proposal of remedies for those defects this was followed by 54 specifications for various types and classes of buildings notes on various materials and an alphabetical digest of the london building act with a comprehensive index a multi purpose book like many of its successors noting that bartholomew was no longer in print t l donaldson was prompted to produce his handbook of specifications in 1859 in which after setting out the principles of specification writing he reproduced 46 specifications for actual buildings and other works by his illustrious contemporaries this included the houses of parliament by sir charles barry and newcastle high level bridge by robert stephenson and was followed by 136 pages on the law as applied to building matters this is a fascinating book invaluable to construction historians but will have been of less use to authors of specifications than a sequential list of trade based clauses

bartholomew's book was revised again twice by frederick rogers in 1886 and 1893 but still with a similar essay followed by specifications for various types of building but now only 27 rather than trade based clauses for which we had to wait for the first edition of macey in 1898 frank w macey's predecessors had a tendency to set out what should be covered in specifications and the ills of poor specification together with a quantity of information about the use of various materials and construction methods this was admittedly useful but better covered in the books on building construction that had started to appear at about the same date such as mitchell and rivingtons published in facsimile by donhead in 2004 macey by contrast dived almost straight in to trade based clauses in a logical order the specification author in an architect's office must have heaved a sigh of relief when macey landed on his desk because here was a book that provided just what he needed to cut and paste in the order he needed it and with marginal sketches showing how the materials and details were applied similarly students of architecture had a useful source of reference for the work by the various trades instead of having to look at the trade in each specification when referring to earlier books to decide which example to follow contemporary reviews of macey criticized the book for being out of date as he failed to cover all the latest developments in materials in hindsight that attitude appears less than fair because any architect incorporating recently introduced materials such as reinforced concrete or metal lathing would make sure he was fully conversant with them and their use and would be able to describe them adequately as a matter of common prudence no book would be able to keep up to date with the rapidly developing variety of materials appearing almost daily at the dawn of the edwardian era that was more than adequately addressed by the annual initially quarterly specification published by the architectural press which started the same year that the first edition of macey was published and continued to keep construction professionals informed every year until 1992 frank macey revised and enlarged the text in 1904 for the second edition having published his companion volume on conditions of contract in 1902 and taking account of criticisms in the builder's review of his first edition it is his second edition that this introduction accompanies having been chosen by donhead to give us an exhaustive reference to the materials and construction in use at the end of the victorian era and the dawn of the twentieth century it will also help us today when drafting specifications for work on buildings that have just passed their centenary frank william macey 1863 1935 practised as an architect in the city of london before emigrating to canada he was the first resident architect in burnaby in british columbia where he settled in the first decade of the twentieth century and obtained a number of commissions from prominent businessmen who were building grand homes in the new community of deer lake he designed predominantly in the british arts and crafts style and introduced the use of rough cast stucco for building exteriors a characteristic for which he was renowned he also designed three churches two of which are still standing macey's specifications in detail survived his departure to canada the third edition co authored by j p allen pasi was published in 1922 and the fourth edition revised by donald brooke ma barch ariba mistructe a lecturer in architecture at the university of liverpool and j w summerfield fasi mrsani a quantity surveyor was published in 1930 with a second

impression in 1937 the fifth edition revised by the then late donald brooke and stanley wilkinson barch ariba a senior lecturer in architectural construction at the university of liverpool was published in 1955 and takes specification writing through to the introduction of the national building specification in 1973 continuing where macey had started with trade based clauses in a logical order a contemporary reviewer of the first edition praised so much that is excellent in the book and so many things explained of which the young architect would have much difficulty in finding a description in other books the fact that macey gave a great amount of practical information as to the details of construction on points which are not usually to be met with in text books means that this facsimile should find a place on the bookshelves of construction professionals from all disciplines today alongside donhead s other facsimiles as a well indexed guide to what they can expect to find when working on late victorian and edwardian buildings students of conservation practice may like to note this comment from the same contemporary reviewer it may therefore be looked upon as a guide to the young architect in practical matters quite as much as a model for specification writing it indeed attempts to furnish the novice with the knowledge that he ought to possess before sitting down to write a specification if macey s book was valued a hundred years ago for these reasons there is all the more reason today to use it as a reliable reference to what will be found in buildings that have celebrated their centenary lawrance hurst august 2009

Manis Valuations and Prüfer Extensions II

2014-03-20

supply and demand management in ride sourcing markets offers a fundamental modeling framework for characterizing ride sourcing markets by spelling out the complex relationships among key endogenous and exogenous variables in the markets this book establishes several economic models that can approximate matching frictions between drivers and passengers describes the equilibrium state of ride sourcing markets and more based on these models the book develops an optimum strategy in terms of trip fare wage and or matching that maximizes platform profit while the best social optimum solution for maximizing the social welfare is generally unsustainable this book provides options governments can use to encourage second best solutions in addition the book s authors establish models to analyze ride pooling services with traffic congestion externalities incorporated into models to see how both new platforms and government designs can optimize operating strategies in response to the level of traffic congestion serves as a foundation for subsequent research studies that investigate ride sourcing services through mathematical modeling offers valuable managerial insights for ride sourcing platforms and helps them develop more efficient and effective operating strategies assists the governments or social planners in designing appropriate regulatory schemes to achieve more sustainable and societally beneficial market outcomes

Extended States for the Schrödinger Operator with Quasi-Periodic Potential in Dimension Two

2019-04-10

this collection of groundbreaking new essays show how aristotle s natural science illuminates fundamental topics in his philosophy

Specifications in Detail

2015-10-06

this book presents state of the art lectures delivered by international academic and industrial experts in the field of computational science and its education covering a wide spectrum from theory to practice topics include new developments in finite element method fem finite volume method and spline theory such as moving mesh methods galerkin and discontinuous galerkin schemes shape gradient methods mixed fems superconvergence techniques and fourier spectral approximations with applications in multidimensional fluid dynamics maxwell equations in discrepancy media and phase field equations it also discusses some interesting topics related to stokes equations schrodinger equations wavelet analysis and approximation theory contemporary teaching issues in curriculum reform also form an integral part of the book this book will therefore be of significant interest and value to all graduates research scientists and practitioners facing complex computational problems administrators and policymakers will find it is an addition to their mathematics curriculum reform libraries

this book offers a new account of aristotle s practical philosophy pavlos kontos argues that aristotle does not restrict practical reason to its action guiding and motivational role rather practical reason remains practical in the full sense of the term even when its exercise does not immediately concern the guidance of our present actions to elucidate why this wider scope of practical reason is important kontos brings into the foreground five protagonists that have long been overlooked a spectators or judges who make non motivational judgments about practical matters that do not interact with their present deliberations and actions b legislators who exercise practical reason to establish constitutions and laws c hopes as an active engagement with moral luck and its impact on our individual lives d prayers as legislators way to deal with the moral luck hovering around the birth of constitutions and the prospect of a utopia and e people who are outsiders or marginal cases of the responsibility community because they are totally deprived of practical reason building on a wide range of interpretations of aristotle s practical philosophy from the ancient commentators to contemporary analytic and continental philosophers kontos offers new insights about aristotle s philosophical contribution to the current debates about radical evil moral luck hope utopia internalism and externalism and the philosophy of law aristotle on the scope of practical reason will appeal to researchers and advanced students interested in aristotle s ethics ancient philosophy and the history of practical philosophy
