presto no more pests proclaimed a 1955 article introducing two new pesticides miracle workers for the housewife and back yard farmer easy to use effective and safe who wouldn't love synthetic pesticides apparently most americans did and apparently still do why in the face of dire warnings rising expense and declining effectiveness do we cling to our chemicals michelle mart wondered her book a cultural history of pesticide use in postwar america offers an answer america's embrace of synthetic pesticides began when they burst on the scene during world war ii and has held steady into the 21st century for example more than 90 of soybeans grown in the us in 2008 are roundup ready gmos dependent upon generous use of the herbicide glyphosate to control weeds mart investigates the attraction of pesticides with their up to the minute promise of modernity sophisticated technology and increased productivity in short their appeal to human dreams of controlling nature she also considers how they reinforced cold war assumptions of western economic and material superiority though the publication of rachel carson's silent spring and the rise of environmentalism might have marked a turning point in americans faith in pesticides statistics tell a different story pesticides a love story recounts the campaign against ddt that famously ensued but the book also shows where our notions of silent spring's revolutionary impact falter where in spite of a ban on ddt farm use of pesticides in the united states more than doubled in the thirty years after the book was published as a cultural survey of popular and political attitudes toward pesticides pesticides a love story tries to make sense of this seeming paradox at heart it is an exploration of the story we tell ourselves about the costs and benefits of pesticides and how corporations government officials ordinary citizens and the press shape that story to reflect our ideals interests and emotions

oxides and acids of nitrogen play an important role in regulating atmospheric radical levels in particular that of the OH radical the main initiator of the degradation of chemicals in the atmosphere a comprehensive overview on the methods used to measure nitrogen oxides and acids in the troposphere is given and difficulties and artefacts associated with the use of the techniques for measurements in urban and mega city environments is illustrated state of the art methods for the measurement of OH and HO₂ radicals are reviewed and recently recognised difficulties in particular with the measurement of HO₂ radicals are highlighted other contributions to the book cover our present understanding of the gas aqueous and particulate aerosol phase atmospheric degradation chemistry of volatile organic compounds VOCs under NO_x conditions typical of rural urban and mega city environments examples of measurements of NO_x and VOCs in the atmospheres of these environments are given in particular for the megacities Cairo and Beijing in conjunction with modelling studies which attempt to simulate the field observations using state of the art knowledge on the chemistry of the VOCs and radical levels
