Introduction to Two-Dimensional Design 2020-07 the author polls several designers of different age groups and phases in their careers about what they consider a good design each has selected an existing design piece they feel to be good based on their personal definition of what a good is the author also takes a critical look at the design to determine if it is effective with its target market and interviews the designer of the piece to unlock the concept behind the design by taking this backwards approach through design from completed piece back to conception readers will discover why the design works and how they can use this information in their own projects

 **Design Principles** 2020 2012-03-16 design principles never change they serve as the foundation of the designer s thought process and are the essential tools that define a visual language with hundreds of fundamental principles for creating successful design compositions design elements form space establishes a basis for visual organization strategies and serves as a comprehensive manual for graphic designers understanding how elements interact in a layout is a critical step in stimulating visual thinking and compositional decision making and this book illustrates these principles in numerous diagrams drawings and practical examples of application you ll also learn how conventional color harmonies effect form and space and how to apply elements to images and type to create balanced layouts gain a deeper aesthetic understanding of form in the context of ordering space with design elements form space

Typographic Design 2009-08-01 these notes are about the process of design the process of inventing things which display new physical order organization form in response to function this book opening with these words presents an entirely new theory of the process of design in the first part of the book christopher alexander discusses the process by which a form is adapted to the context of human needs

and demands that has called it into being he shows that such an adaptive process will be successful only if it proceeds piecemeal instead of all at once it is for this reason that forms from traditional un self conscious cultures molded not by designers but by the slow pattern of changes within tradition are so beautifully organized and adapted when the designer in our own self conscious culture is called on to create a form that is adapted to its context he is unsuccessful because the preconceived categories out of which he builds his picture of the problem do not correspond to the inherent components of the problem and therefore lead only to the arbitrariness willfulness and lack of understanding which plague the design of modern buildings and modern cities in the second part mr alexander presents a method by which the designer may bring his full creative imagination into play and yet avoid the traps of irrelevant preconception he shows that whenever a problem is stated it is possible to ignore existing concepts and to create new concepts out of the structure of the problem itself which do correspond correctly to what he calls the subsystems of the adaptive process by treating each of these subsystems as a separate subproblem the designer can translate the new concepts into form the form because of the process will be well adapted to its context non arbitrary and correct the mathematics underlying this method based mainly on set theory is fully developed in a long appendix another appendix demonstrates the application of the method to the design of an indian village
