configuration management is a systems engineering process that helps businesses maintain the performance quality and functionality of a given product system or other it asset throughout its lifecycle tailored configuration management cm practices enable system administrators to track the state of assets like computer systems servers and what is configuration management configuration management is a process to properly track changes to a system s configuration through its whole lifecycle it collects data like date of change version number status product owner components and more it s an important part of devops overview configuration management is a process for maintaining computer systems servers applications network devices and other it components in a desired state it s a way to help ensure that a system performs as expected even after many changes are made over time using configuration management tools administrators can set up an it configuration management is a systems engineering process for establishing consistency of a product s attributes throughout its life in the technology world configuration management is an it management process that tracks individual configuration items of an it system it systems are composed of it assets that vary in granularity an it configuration management cm is a systems engineering process for establishing and maintaining consistency of a product s performance functional and physical attributes with its requirements design and operational information throughout its life configuration management is the process of ensuring that the configurations of a system s servers applications and other environments remain known consistent and trusted over time any it system has certain configurations related to software versions security networking and other settings that are essential for optimal functioning configuration management or cm is an approach to maintaining software systems servers applications network devices and additional it components in a predefined and desired condition this ensures the software system works as intended even amidst numerous alterations over time configuration management is the practice of systematically identifying and tracking it assets their status and relationships among them the right network configuration provides it with the processes to control changes to components or parameters configuration management cm is a governance and systems engineering process used to track and control it resources and services across an enterprise when properly implemented configuration management ensures that an organization knows how its technology assets are configured and how those items relate to one another a configuration management system cms is a set of tools and processes for managing the configurations of computer systems including software hardware and networks a configuration management system can organize and control configurations to enforce a consistent desired state over time configuration management cm is a governance and systems engineering process used to track and control it resources and services across an enterprise when properly implemented configuration management ensures that an organization knows how its technology assets are configured and how those items relate to one another use configuration manager to help you with the following systems management activities increase it productivity and efficiency by reducing manual tasks and letting you focus on high value projects maximize hardware and software investments empower user productivity by providing the right software at the right time a configuration management system allows the enterprise to define settings in a consistent manner then to build and maintain them according to the established baselines a configuration management plan should include a number of tools that enable classification and management of systems in groups introduction as a broader subject configuration management cm refers to the process of systematically handling changes to a system in a way that it maintains integrity over time even though this process was not originated in the it industry the term is broadly used to refer to server configuration management configuration management cm is the practice of maintaining computer systems in a consistent and desirable state the cm team tracks and manages your organization s software and hardware assets to ensure they are working optimally and are up to date gartner defines cm software as configuration management is defined as the process of consistently maintaining a product s functionality and performance quality throughout its shelf life by making timely reconfigurations to its internal systems which makes configuration management a subset of systems engineering configuration management cm is an effective strategy designed to help organizations govern control policies and maintain server and data integrity configuration management provides visibility into how systems and controls rely on each other informing network stakeholders of the potential impact of change to network components or controls configuration management tools are software applications and systems used to automate and streamline the management of an organization s it infrastructure software and hardware configurations these tools help it professionals maintain consistency control and compliance in their environments system configuration management scm is a software engineering practice that focuses on managing the configuration of software systems and ensuring that software components are properly controlled tracked and stored configuration management tools are software solutions that enhance system stability and agility they automate the management and tracking of it infrastructure devops teams use these tools to help provision configure and deploy software and hardware resources across diverse environments
