Query Understanding for Search Engines *2020-12-01*

this book presents a systematic study of practices and theories for query understanding of search engines these studies can be categorized into three major classes the first class is to figure out what the searcher wants by extracting semantic meaning from the searcher s keywords such as query classification query tagging and query intent understanding the second class is to analyze search queries and then translate them into an enhanced query that can produce better search results such as query spelling correction or query rewriting the third class is to assist users in refining or suggesting queries in order to reduce users search effort and satisfy their information needs such as query auto completion and query suggestion query understanding is a fundamental part of search engines it is responsible to precisely infer the intent of the query formulated by the search user to correct spelling errors in his her query to reformulate the query to capture its intent more accurately and to guide the user in formulating a query with precise intent the book will be invaluable to researchers and graduate students in computer or information science and specializing in information retrieval or web based systems as well as to researchers and programmers working on the development or improvement of products related to search engines

Design of Intelligent Multi-Agent Systems

2013-07-25

there is a tremendous interest in the design and applications of agents in virtually every area including avionics business internet engineering health sciences and management there is no agreed one definition of an agent but we can define an agent as a computer program that autonomously or semi autonomously acts on behalf of the user in the last five years transition of intelligent systems research in general and agent based research in particular from a laboratory environment into the real world has resulted in the emergence of several phenomenon these trends can be placed in three catego ries namely humanization architectures and learning and adapta tion these phenomena are distinct from the traditional logic centered approach associated with the agent paradigm humaniza tion of agents can be understood among other aspects in terms of the semantics quality of design of agents the need to humanize agents is to allow practitioners and users to make more effective use of this technology it relates to the semantic quality of the agent design further context awareness is another aspect which has as sumed importance in the light of ubiquitous computing and ambi ent intelligence the widespread and varied use of agents on the other hand has cre ated a need for agent based software development frameworks and design patterns as well architectures for situated interaction nego tiation e commerce e business and informational retrieval fi vi preface nally traditional agent designs did not incorporate human like abilities of learning and adaptation

pocket guide to the empire

Range Rover Sport 2005-2013 *2019-11-28*

when the range rover sport was launched in 2005 it was aimed at a new group of customers who in many cases would never have considered a land rover product before these customers wanted and could afford a luxurious vehicle that was expensive to run but they also wanted a very personalized vehicle that did not have the rather grand and conservative connotations of the full size range rover brasher and more glamorous than its older sibling the sport was soon adopted by celebrities and others who expected to be noticed range rover sport the complete story is the first book devoted specifically to the first generation range rover sport it tells the story behind the development and launch of the vehicle it explains the market reaction including contemporary press reviews provides details of each model with technical specification tables and colour and trip options lists production figures and vin identification and dating details prices and sales figures for the uk usa and canada and finally includes a useful chapter on buying and owning

InfoWorld *2004*

we can hardly underestimate the importance of privacy in our data driven world privacy breaches are not just about disclosing information personal data is used to profile and manipulate us sometimes on such a large scale that it affects society as a whole what can governments do to protect our privacy in the governance of privacy hans de bruijn first analyses the complexity of the governance challenge using the metaphor of a journey at the start users have strong incentives to share data harvested data continue the journey that might lead to a privacy breach but not necessarily it can also lead to highly valued services that is why both preparedness at the start of the journey and resilience during the journey are crucial to privacy protection the book then explores three strategies to deal with governments the market and society governments can use the power of the law they can exploit the power of the market by stimulating companies to compete on privacy and they can empower society strengthening its resilience in a data driven world

traditionally packaging has been the responsibility of specialist designers and suppliers and ensuring cost effective packaging has been left to production purchasing and packaging engineering departments the importance of brand values in packaging is now recognized with the dominance of self service outlets the pack is the silent salesman its effective use is vital to a successful marketing strategy whether you are working on an existing or new product or venturing into new markets packaging is a critical consideration it will enable you to direct the focus of packaging design to improve design and cut costs guidelines are contained for you to achieve the optimum balance between packaging costs and sales performance you will be shown how to think through the options prior to and during design work as well as how to maximize your own vital contribution

Part-time King In Three Realms 1994-03

the central premise of design for transport is that the designer s role is to approach design for transport from the point of view of the user people have a collection of wants and needs and a significant proportion of them are to do with their requirements for mobility the authors show how creative designers can take a user focused approach for a wide range of types of transport products and systems in so doing their starting point is one of creative dissatisfaction with what is currently available and their specialist capability is in imagining and developing new solutions which

respond to that opportunity how this is tackled varies depending on the context and the variety of solutions produced reflects the different aspirations and needs of the people they are designing for the chapters cover user needs and transport design and the transport system transport design case studies and the case for the automobile a conclusion briefly signals what the future for transport design might be lavishly illustrated throughout in four colour design for transport is an imaginative and rigorous guide to how designers can take a user centred and socially responsible approach to tackling a range of types of transport from systems to products and from bicycles to automobiles demonstrating a rich array of solutions through case studies
