part of the mcgraw hill core concepts in electrical engineering series circuits and networks analysis and synthesis is designed as a textbook for an introductory circuits course at the intermediate undergraduate level the book may also be appealing to a non major survey course in electrical engineering course as well a primary goal in circuits and networks is to establish a firm understanding of the basic laws of electrical circuits and to provide students with a working knowledge of the commonly used methods of analysis in electrical engineering the text assumes no mathematical knowledge making it easy for students to immediately jump into circuit analysis in addition all of the must have s for a circuits text such as an extensive introduction to pspice are present in this book about the core concepts in electrical engineering series as advances in networking and communications bring the global academic community even closer together it is essential that textbooks recognize and respond to this shift it is in this spirit that we will publish textbooks in the mcgraw hill core concepts in electrical engineering series the series will offer textbooks for the global electrical engineering curriculum that are reasonably priced innovative dynamic and will cover fundamental subject areas studied by electrical and computer engineering students written with a global perspective and presenting the latest in technological advances these books will give students of all backgrounds a solid foundation in key engineering subjects

this book caters to a course on circuits and networks with coverage of both analysis and synthesis lucid language fundamental discussions and illustrative examples are some of the excellent features of this text there are numerous solved examples employing the step wise problem solving approach which helps in easy grasping of the concepts by the students the numericals employ both ac and dc methods of analysis multiple choice questions and practice

problems have been provided in plenty and are of graded challenge levels helping the students to prepare for competitive examinations pspice problems have been incorporated to help in simulation

as new technological challenges are perpetually arising artificial intelligence research interests are focusing on the incorporation of improvement abilities into machines in an effort to make them more efficient and more useful recent reports indicate that the demand for scientists with artificial intelligence

skills significantly exceeds the market availability and that this shortage will intensify further in the years to come a potential solution includes attracting more women into the field as women currently make up only 26 percent of artificial intelligence positions in the workforce the present book serves a dual purpose on one hand it sheds light on the very significant research led by women in areas of artificial intelligence in hopes of inspiring other women to follow studies in the area and get involved in related research on the other hand it highlights the state of the art and current research in selected artificial intelligence areas and applications the book consists of an editorial note and an additional thirteen 13 chapters all authored by invited women researchers who work on various artificial intelligence areas and stand out for their significant research contributions in more detail the chapters in the book are organized into three parts namely i advances in artificial intelligence paradigms ii advances in artificial intelligence applications and iii recent trends in artificial intelligence areas and applications this research book is directed towards professors researchers scientists engineers and students in artificial intelligence related disciplines it is also directed towards readers who come from other disciplines and are interested in becoming versed in some of the most recent artificial intelligence based technologies an extensive list of bibliographic references at the end of each chapter guides the readers to probe further into the artificial intelligence areas of interest to them

in today s world the pressing challenges of sustainable development and societal progress demand innovative solutions that harness the power of science and technology from climate change to resource depletion and social inequalities the urgency to find sustainable intelligent and ethical approaches has never been greater academic scholars and researchers play a crucial role in driving these advancements but often struggle to find comprehensive resources that bridge the gap between theory and real world applications the need of the hour is a definitive guide that unites expertise from diverse disciplines and offers practical insights into leveraging sustainable science and intelligent technologies to create meaningful societal development sustainable science and intelligent technologies for societal development edited by brojo kishore mishra of giet university india is the much awaited solution to the challenges faced by academic scholars and researchers this persuasive book brings together an esteemed collection of leading experts academics and industry professionals all dedicated to addressing global challenges through the lens of applied sciences and intelligent technology applications by presenting a wide range of innovative topics such as renewable energy smart healthcare sustainable finance and more the book serves as a

comprehensive resource that empowers scholars with actionable knowledge and innovative ideas the book not only covers the theoretical aspects but also delves into the ethical considerations essential in shaping the future in a world increasingly dependent on technology it is vital to ensure that societal development aligns with principles of inclusivity fairness and environmental responsibility with a focus on the united nations sustainable development goals sdgs the book provides a clear roadmap for scholars to contribute meaningfully to global progress by offering concrete examples and real world case studies the book enables researchers to grasp the potential impact of their work fostering collaborations that transcend traditional disciplinary boundaries sustainable science and intelligent technologies for societal development is the go to resource for academic scholars scientists researchers innovators industry professionals and students who seek to be effective in the world as a comprehensive guide that blends sustainable science and intelligent technologies with ethical considerations this book equips its readers to create tangible solutions that address pressing global challenges through collective knowledge and interdisciplinary collaboration this book stands as a beacon of hope and inspiration for driving meaningful societal development paving the way for a more sustainable and prosperous future

master s thesis from the year 2012 in the subject computer science technical computer science grade 70 griffith college dublin faculty of computing course msc computing language english abstract modern wireless sensor network can be expanded into large geographical areas via cheap sensor devices which can sustain themselves itself with very a low power usage the networking capability enables these sensor nodes to incorporate collaborates and coordinates with among each other and this is a fundamental shift in the field of networks which differentiates sensor network nodes form other networks such as ip datagram ad hoc and so on currently routing in the wireless sensor network faces multiple challenges such as new scalability coverage packet loss interference real time audio and video real time streaming harsh weather environments energy constraints and so forth network routing can be called

an amalgamation of routing protocol and routing algorithm the job of the routing protocols is to provide a cohesive view of network nodes topology while routing algorithm provides the intelligence in terms of optimal path calculation we set out to conduct a detailed study of routing protocols in a ip datagram wireless ad hoc and sensor network and also accomplished routing protocols comparison against the chosen network performance factor dropped packet ratio routing protocols play an important role in modern wireless communication networks routing protocols performance can be measured by a number of factors such as packet dropped rate and so forth rumour and optimal spinal routing algorithms are compared using shox simulation and the results and analysis are based upon the simulation experiments
