conception that allows innovative approaches to overcome barriers of the real world by creating their own rules yet despite the potential interest in such tools to improve treatment of mental disorders and to help prevent them the field remains understudied and information is under disseminated in clinical practice some studies have shown however that there is potential interest and acceptability of tools that support various vehicles rationales objectives and formats these tools include traditional games e g chess games popular electronic games board games computer based interventions specifically designed for psychotherapy or cognitive training virtual reality apps for smartphones and so forth computers and games may offer a true opportunity to develop assess and disseminate new prevention and treatment tools for mental health and well being currently there is a strong need for state of the art information to answer questions such as the following why develop such tools for mental health and well being what are the potential additions to traditional treatments what are the best strategies or formats to improve the possible impact of these tools are such tools useful as a first treatment step what is the potential of a hybrid model of care that combines traditional approaches with games and or computers as tools what games and applications have already been designed and studied what is the evidence from previous studies how can such tools be successfully designed for mental health and well being what is rewarding or attractive for patients in using such treatments what are the worldwide developments in the field are some protocols under development what are the barriers and challenges related to such developments how can these tools be assessed and how can the way that they work and for whom be measured are the potential benefits of such products specific or can these additions be attributed to nonspecific factors what are the users views on such tools what are the possible links between such tools and social networks is there a gap between evidence based results and market development are there any quality challenges what future developments and studies are needed in the field

PC Mag 2018-07-12 assessment is a key driver in mathematics education this book examines computer aided assessment caa of mathematics in which computer algebra systems cas are used to establish the mathematical properties of expressions provided by students in response to questions in order to automate such assessment the relevant criteria must be encoded and in articulating precisely the desired criteria the teacher needs to think very carefully about the goals of the task hence caa acts as a vehicle to examine assessment and mathematics education in detail and from a fresh perspective one example is how it is natural for busy teachers to set only those questions that can be marked by hand in a straightforward way even though the constraints of paper based formats restrict what they do and why there are other kinds of questions such as those with non unique correct answers or where assessing the properties requires the marker themselves to undertake a significant computation it is simply not sensible for a person to set these to large groups of students when marking by hand however such questions have their place and value in provoking thought and learning this book aimed at teachers in both schools and universities explores how in certain cases different question types can be automatically assessed case studies of existing systems have been included to illustrate this in a concrete and practical way
