Maps of Paradise

2014-02-15

at the beginning of the twentieth century industrialization both dramatically altered everyday experiences and shaped debates about the effects of immigration empire and urbanization in *American Abyss* Daniel E. Bender examines an array of sources eugenics theories scientific studies of climate socialist theory and even popular novels about cavemen to show how intellectuals and activists came to understand industrialization in racial and gendered terms as the product of evolution and as the highest expression of civilization their discussions he notes are echoed today by the use of such terms as the developed and developing worlds american industry was contrasted with the supposed savagery and primitivism discovered in tropical colonies but observers who made those claims worried that industrialization by encouraging immigration child and women s labor and large families was reversing natural selection factories appeared to favor the most unfit there was a disturbing tendency for such expressions of fear to favor eugenicist remedies bender delves deeply into the culture and politics of the age of industry linking urban slum tourism and imperial science with immigrant better baby contests and hoboes *American Abyss* uncovers the complex interactions of turn of the century ideas about race class

gender and ethnicity moreover at a time when immigration again lies at the center of american economy and society this book offers an alarming and pointed historical perspective on contemporary fears of immigrant laborers

want to know what the weather is like in different parts of the world in this book children will learn about maps that feature the world's different climate zones temperature and precipitation they will also learn how maps can track climate change

Manual of Geography

1894

the biggest challenge of the twenty first century is to bring the effects of public life into relation with the intractable problem of global atmospheric change climate and the picturesque in the american tropics explains how we came to think of the climate as something abstract and remote rather than a force that actively shapes our existence the book argues that this separation between climate and sensibility predates the rise of modern climatology and has deep roots in the era of colonial expansion when the american tropics were transformed into the economic supplier for euro american empires the book shows how the writings of american travellers in the caribbean registered and pushed forward this new understanding of the climate in a pivotal period in modern history roughly between 1770 and 1860 which was fraught with debates over slavery environmental destruction and colonialism offering novel readings of authors including j hector st john de crevecoeur leonora sansay william cullen bryant nathaniel hawthorne sophia peabody ralph waldo emerson and james mccune smith in light of their engagements with the american tropics this book shows that these authors drew on a climatic epistemology that fused science and sentiment in ways that citizen science is aspiring to do today by suggesting a

new genealogy of modern climate thinking climate and the picturesque in the american tropics thus highlights the urgency of revisiting received ideas of tropicality deeply ingrained in american culture that continue to inform current debates on climate debt and justice
