for decades it has been nearly universal dogma among environmentalists and health advocates that cattle and beef are public enemy number one but is the matter really so clear cut hardly argues environmental lawyer turned rancher nicollette hahn niman in her new book defending beef the public has long been led to believe that livestock especially cattle erode soils pollute air and water damage riparian areas and decimate wildlife populations in defending beef hahn niman argues that cattle are not inherently bad for either the earth or our own nutritional health in fact properly managed livestock play an essential role in maintaining grassland ecosystems by functioning as surrogates for herds of wild ruminants that once covered the globe hahn niman argues that dispersed grass fed small scale farms can and should become the basis for american food production replacing the factory farms that harm animals and the environment the author a longtime vegetarian goes on to dispel popular myths

about how eating beef is bad for our bodies she methodically evaluates health claims made against beef demonstrating that such claims have proven false she shows how foods from cattle milk and meat particularly when raised entirely on grass are healthful extremely nutritious and an irreplaceable part of the world's food system grounded in empirical scientific data and with living examples from around the world defending beef builds a comprehensive argument that cattle can help to build carbon sequestering soils to mitigate climate change enhance biodiversity help prevent desertification and provide invaluable nutrition defending beef is simultaneously a book about big ideas and the author's own personal tale she starts out as a skeptical vegetarian and eventually becomes an enthusiastic participant in environmentally sustainable ranching while no single book can definitively answer the thorny question of how to feed the earth's growing population defending beef makes the case that whatever the world's future food system looks like cattle and beef can and must be part of the solution

americans have long believed that the private lives of their politicians are important indicators of their fitness to lead and of their ability to defend and uphold american values for many a sex scandal renders a person ineligible or at the very least questionably qualified for public service in compromising positions leslie dorrough smith questions the assumption that sex scandals are really about sex that is that they are primarily concerned with the discovery of sexual misconduct she argues that they are instead a form of cultural storytelling that uses racial and gendered symbols to create a collective sense of national worth and strength smith shows that sex scandals involve the use of four very powerful social tools gender race politics and religion that together create a rhetoric about what america is who is eligible to formally represent it and what types of symbolic religiosity such leaders must display to legitimize their power americans tend to condemn or excuse the sexual misdeeds of their politicians depending on the degree to which the individual in question reinforces

evangelical interpretations of american values and a christian nation such values include not just moral integrity but strength courage and conquest as a consequence sex scandals are less likely to occur in cultural moments when the public is open to reading a politician s moral lapse as a symbolic form of national dominance put simply when a leader is perceived as strong domineering and necessary for national health many people will find ways either to overlook his illicit sexual behavior or somehow read it as an american act
