The Djief Hunters, 26,000 Years of Rainforest Exploitation on the Bird's Head of Papua, Indonesia

2004-07-01

two prehistoric cave sites on the bird s head of western new guinea provide a detailed narrative of 26 000 years of human occupation of this area during late pleistocene times lower temperatures allowed a suite of montane animal species to descend onto the lowland ayamaru plateau when the montane fauna receded during the subsequent climatic amelioration people switched their hunting focus to a forest wallaby known locally as djief detailed analysis of this species remains including the reconstruction of their age profile provides insights into why prolonged hunting of this species did not lead to its extinction the wallaby population evidently thrived at its demographic maximum throughout the early and mid holocene suggesting that human population densities and therefore hunting pressure were low until c 5000 bp this volume of modern quaternary research in southeast asia offers a unique perspective on sustainable hunting in prehistory and provides intriguing insights into hunter gatherer subsistence tool manufacturing and use the changing intensity of occupation of the sites and environmental exploitation from late pleistocene times onwards in a lowland tropical region it forms an important contribution to the current debate on the possibilities of human occupation of tropical rainforest before the advent of agriculture

Code of Federal Regulations

1998

as part of an increasing interest in radiation embrittlement for aging nuclear reactors scientists gathered in new orleans in january 1997 to consider the interests and capabilities of the scientific testing community and of the commercial light water cooled power reactor industry in terms of improving methods to characterize component integrity the resulting 37 papers concentrate on the use of unique small and miniature specimens nondestructive nonintrusive and in situ test techniques for measuring mechanical and fracture properties the application of tests to irradiation induced embrittlement and actual examples of tests to determine material integrity and to evaluate potential component life extension they consider experimental analytical and computational aspects annotation copyrighted by book news inc portland or

Small Specimen Test Techniques

1998

amicus readers at level 1 include a picture glossary a table of contents index websites and literacy notes located in the back of each book additionally content words are introduced within the text supported by a variety of photo labels in particular this title describes how simple

machines are used in construction and how they make work easier includes experiments

Federal Register

1974-05

this volume offers a detailed study of six exceptional rockshelter sites from the inland pilbara region of western australia consisting of 18 chapters it is rich with colour photographs illustrations and figures including high resolution images of the rockshelter sites excavations stratigraphic sections cultural features and artefacts

Code of Federal Regulations Title 16

2006-03

this book gathers original papers reporting on innovative methods and tools in design modelling simulation and optimization and their applications in engineering design manufacturing and other relevant industrial sectors topics span from advances in geometric modelling applications of virtual reality innovative strategies for product development and additive manufacturing human factors and user centered design engineering design education and applications of engineering design methods in medical rehabilitation and cultural heritage chapters are based on contributions to the second international conference on design tools and methods in industrial engineering adm 2021 held on september 9 10 2021 in rome italy and organized by the italian association of design methods and tools for industrial engineering and dipartimento di ingegneria meccanica e aerospaziale of sapienza università di roma italy all in all this book provides academics and professionals with a timely overview and extensive information on trends and technologies in industrial design and manufacturing

Specimen Examination Paper

1980

this volume sheds new light on the marine fauna and geological setting of the tjörnes sequence north iceland which is a classic site for the pliocene and pleistocene stratigraphy of the north atlantic region readers will discover descriptions of new data collected by the editors over a period of over three decades on marine faunal assemblages and sedimentology available for palaeoenvironmental reconstructions as well as the tectonic and stratigraphical relationships on tjörnes peninsula the book includes a comprehensive account of all the collections of marine fossil invertebrate macrofossils and foraminifera known to the editors from the tjörnes sequence it is expected to elucidate sedimentological and faunal changes from relatively stable pliocene conditions to highly variable and periodically harsh climatic conditions of recurring quaternary glaciations the distribution recent or fossil of various species is recorded and pertinent ecological and biological features are also discussed the tjörnes sequence records the neogene migration of pacific species into the north atlantic researchers in geology

climate science environmental science and earth science will find this book particularly valuable

2002

in november 2015 buenos aires argentina became the location of several important events for geo professionals with the simultaneous holding of the 6th international symposium on deformation characteristics of geomaterials the 15th pan american conference on soil mechanics and geotechnical engineering xv pcsmg the 8th south american congress on rock mechanics scrm as well as the 22nd argentinean congress of geotechnical engineering camsigxxii this synergy provided a unique opportunity to exchange ideas and discuss current and future practices in the areas of soil mechanics and rock mechanics and their applications in civil energy environmental and mining engineering this book presents the proceedings of the 6th international symposium on deformation characteristics of geomaterials as well as 118 articles selected for publication after peer review it includes 7 lectures delivered by invited keynote speakers and the third bishop lecture delivered by professor herve di benedetto of the university of lyon france who presented a reference work on the advanced testing and modeling of bituminous bounded and unbounded granular materials the conference brought together practitioners researchers and educators from around the world engaged in the understanding of the deformation properties of geo materials before failure and the small strain parameters as fundamental characteristics of geo materials the main topics covered by the symposium include experimental investigations from very small strains to beyond failure including multi physical approach htc m coupling behavior characterization and modeling of various geo materials and interfaces and practical prediction and interpretation of ground responses field observation and case histories

Bulletin

1997

this book chronicles the discovery and analysis of animal fossils found in one of the most important paleontological sites in the world porcupine cave located at an elevation of 9 500 feet in the colorado rocky mountains with tens of thousands of identified specimens this site has become the key source of information on the fauna of north america s higher elevations between approximately 1 million and 600 000 years ago a period that saw the advance and retreat of glaciers numerous times until now little has been understood about how this dramatic climate change affected life during the middle pleistocene in addition to presenting state of the art data from porcupine cave this study also presents groundbreaking analysis on what the data from the site show about the evolutionary and ecological adjustments that occurred in this period shedding light on how one of the world s most pressing environmental concerns global climate change can influence life on earth

Rockshelter Excavations in the East Hamersley Range, Pilbara Region, Western Australia

2018-08-13

continental margins form the relatively narrow transition zones between the different domains of land masses and deep ocean basins they are the main regions of sediment input and transfer of sediments to the oceans and thus represent important zones of sediment flux this work addresses three topics of significance to continental margin development sedimentation mass wasting and stability it should be of interest to marine geologists sedimentologists palaeoceanographers and physical properties specialists
