dynamic control an overview sciencedirect topics Nov 09 2022 as we move to discussion of functional models and their uses in machines that control a timed process we encounter the concept of dynamics in dynamic control systems the configuration and resulting behavior of the machine are a combination of a model and its associated parameter e g speed time direction etc

learning the optimal control for evolving systems with Oct 08 2022 we consider a principle or controller that can pick actions from a fixed action set to control an evolving system with converging dynamics the converging dynamics means that if the principle holds the same action the system will asymptotically converge to a unique stable state determined by this action
