**Living on the Edge** 2016-06-08 in this book the authors explore the controversial Iranian nuclear programme through the conceptual lens of nuclear hedging in 2002 revelations regarding undeclared nuclear facilities thrust Iran's nuclear activities under the spotlight and prompted concerns that Tehran was pursuing nuclear weapons. Iran has always denied nuclear weapons aspirations yet it cannot be disputed that the Islamic Republic has gone well beyond what is required for a civil nuclear programme based on energy production and scientific research. What then is the nature and significance of Iran's nuclear behaviour? Does it form part of a coherent strategy? What can Iran's actions in the nuclear field tell us about Tehran's intentions and what does the Iranian case teach us about proliferation behaviour? More generally, this book addresses these questions by exploring the nature of nuclear hedging and how this approach might be identified before applying this logic to the Iranian case. It provides fresh insights into the inherently opaque area of nuclear proliferation and a more nuanced interpretation of the Iranian nuclear challenge.

**Globalization and WMD Proliferation** 2009-12-04 this edited volume explores the relationship between the accelerating process of globalization and the proliferation of weapons of mass destruction which is increasingly seen as the pre-eminent threat to international security. The proliferation of weapons of mass destruction has traditionally been seen as a function of the security dilemma in the state-based international system but the advent of the nuclear supply network pieced together by the Pakistani scientist A.Q. Khan represented a departure from this model involving a variety of organizations not directly connected to a state. This volume assembles an international group of experts in order to assess the relationship between proliferation and globalization to ascertain how contemporary communication, transportation and financial networks are facilitating or constraining trade in dangerous contraband. The book ultimately seeks to determine whether globalization is fundamentally altering the nature of the proliferation problem, particularly the threat that weapons of mass destruction might fall into the hands of terrorists. This book will be of much interest to students of nuclear proliferation, international security, terrorism and IR in general.

**WMD Arms Control in the Middle East** 2016-02-17 the Middle East is a hot spot of proliferation. It contains one state assumed to possess nuclear weapons, several states that tried and failed to develop a military nuclear capability, one state under suspicion of trying to do so and it is the world region that witnessed the most frequent and severe employment of chemical weapons since the end of World War I. Notwithstanding, not a single arms control regime concerning weapons of mass destruction (WMD) covers the region as a whole. Instead, we have seen several proliferation-related military operations which have rather contributed to destabilization than served non-proliferation. This volume, written under the auspices of the EU Consortium for Non-Proliferation and Disarmament, determines the current state of diplomatic efforts to establish a WMD-free zone in the Middle East. In doing so, it provides insights into central actors, conflicting political positions, thereby explaining the stalemate of efforts to negotiate a WMD-free zone. Chapters written by renowned experts from academia and policy-oriented think tanks, as well as by next-generation Middle East and arms control experts, introduce the subject to the reader, give background information about arms control initiatives, provide technical expertise and endeavour to make proposals for arms control measures in support of the creation of a Middle East WMD-free zone.

**Preventing Catastrophe** 2009-07-22 this book examines the evolution of international nuclear non proliferation trade controls over time the book argues that the international nuclear export controls have developed in a sub optimal way as a result of a non proliferation collective action problem this has resulted in competition among suppliers owing to the absence of an overarching effective system of control while efforts have been undertaken to address this collective action problem and strengthen controls over time these measures have been inherently limited it is argued here because of the same structural factors and vested interests that led to the creation of the problem in the first place this study examines international controls from the beginning of the nuclear age and early efforts to control the atom up to more recent times and the challenge posed by iranian and north korean nuclear ambitions drawing on

a rich body of original archival research and interviews the book demonstrates that the collective action problem has restrained cooperation in preventing nuclear proliferation and that gaps persist in the international nuclear trade control regime this book will be of much interest to students of nuclear proliferation and arms control security studies and international relations
