implementation issues that range from operating environments to the marketing of software software maintenance legacy systems and re engineering this textbook can be used as a one semester or two semester course in software engineering augmented with an appropriate case or rad tool it emphasizes a practical methodical approach to software engineering avoiding an overkill of theoretical calculations where possible the primary objective is to help students gain a solid grasp of the activities in the software development life cycle to be confident about taking on new software engineering projects the chinese government set a target to reduce china s carbon intensity by 40 45 in 2020 at its 2005 level to achieve this target the government has allocated targets to provinces cities and large enterprises and selected five pilot provinces and eight cities for co2 emission trading such emission trading process will involve decentralization optimization and negotiation the prime objective of this book is to perform academic research on simulating the negotiation process through this research a methodological framework and its implementation are set up to analyze model and facilitate the process of negotiation among central government and individual energy producers under environmental economical and social constraints negotiation in decentralization case study of china s carbon trading in the power sector discusses research carried out on negotiation issues in china regarding chinese power sector reform over the past 30 years results show that conflicts exist between power groups and the national government and that the most current negotiation topics in china s power industry are demand and supply management capital investment energy prices and co2 emission mitigations negotiation in decentralization case study of china s carbon trading in the power sector is written for government policy makers energy and environment industry investors energy program and project managers environment conservation specialists university professors researchers and graduate students it aims to provide a methodology and a tool that can resolve difficult negotiation issues and change a loss loss situation to a win win situation for key players in a decentralized system including government policymakers energy producers and environment conservationists
