Code Compliance Inspector 2020-10-20 urbanization and growing wealth in developing countries portend a large increase of demand for modern energy services in residential

commercial and public service buildings in the coming decades pursuing energy efficiency in buildings is vital to energy security in developing countries and is identified by the intergovernmental panel on climate change as having the greatest potential for cost effective reduction of CO<sub>2</sub> emissions by 2030 among all energy consuming sectors. Building energy efficiency codes, BECCs, along with energy efficiency standards for major appliances and equipment are broadly recognized as a necessary government intervention to overcome persistent market barriers to capturing the economic potential of energy efficiency gains in the residential, commercial and public service sectors. Implementation of BECCs help prevent costly energy wastes over the lifecycles of buildings in space heating, air conditioning, lighting and other energy service requirements. Nonetheless, achieving the full potential of energy savings afforded by more energy efficient buildings requires holding people who live or work in buildings accountable for the cost of energy services. Compliance enforcement has been the biggest challenge to implementing BECCs. This report summarizes the findings of an extensive literature survey of the experiences of implementing BECCs in developed countries as well as those from case studies of China, Egypt, India and Mexico. It also serves as a primer on the basic features and contents of BECCs and the commonly adopted compliance and enforcement approaches. This report highlights the key challenges to improving compliance enforcement in developing countries including government commitment to energy efficiency, the effectiveness of government oversight of the construction sector, the compliance capacity of building supply chain and financing constraints. The report notes that the process of transforming a country's building supply chain toward delivering increasingly more energy efficient buildings takes time and requires persistent government intervention through uniformly enforced and regularly updated BECCs. The report recommends increased international support in strengthening the enforcement infrastructure for BECCs in middle income developing countries. For low and lower middle income countries there is an urgent need to assist in improving the effectiveness of government oversight system for building construction, laying the foundation for the system to also cover BECCs.
