this text contains three units covering maths concentration and dosage calculations unit one covers math skills which are essential in order to understand the mathematical basis for performing the most demanding calculations the most complicated pharmaceutical calculations you are likely to come across require understanding fractions equivalent fractions the addition and subtraction of fractions in addition to applying algebra in order to find unknown in a simple algebraic relationship unit two describes the basic units of the metric system the base units of the metric system are described in addition to multiples and fractions of these units a few units of measure other than the metric system units of measure are still used they are described here and their metric equivalents are explained methods used to express medicine concentrations are described here in addition to ratio strength parts and units this unit also describes how to select the most appropriate weighing or measuring equipment and explains how to determine the errors involved unit three looks at various types of dosage forms abbreviations used in writing prescriptions such as abbreviations to indicate time and frequency of medicine administration in addition to abbreviations which indicate site of administration of a medicine the calculations of standard solid dosages

is looked at followed by calculation of liquid dosages patient specific and non patient specific dosage forms and finally the calculations relevant to intravenous infusion which are mainly carried out in primary care environment calculation of equivalent therapeutic doses and calculations required in reconstitution of powdered formulations
