developments in laparoscopic and hysteroscopic gynaecological surgery includes new chapters on ovarian tumours ectopic pregnancy and tubal surgery extensive author and editor team from europe usa and canada includes nearly 750 colour images and illustrations and four interactive dvd roms previous edition published in 2006 the annual series global conferences on sustainable manufacturing gcsn sponsored by the international academy for production engineering cirp is committed to excellence in the creation of sustainable products and processes that conserve energy and natural resources have minimal negative impacts upon the natural environment and society and adhere to the core principle of sustainability by considering the needs of the present without compromising the ability of future generations to meet their own needs to promote this noble goal there is a great need for increased awareness in education and training including the dissemination of new findings on principles and practices of sustainability applied to manufacturing the series global conferences on sustainable manufacturing offers international colleagues the opportunity to network expand their knowledge and improve practice globally this book has been written as part of a series of scientific books being published by plenum press the scope of the series is to review a chosen topic in each volume to supplement this information the abstracts to the most important references cited in the text are reprinted thus allowing the reader to find in depth material without having to refer to many additional publications this volume is dedicated to the field of dry plasma etching as applied in silicon semiconductor processing although a number of books have appeared dealing with this area of physics and chemistry these all deal with parts of the field this book is unique in that it gives a compact yet complete in depth overview of fundamentals systems processes tools and applications of etching with gas plasmas for vlsi examples are given throughout the fundamental sections in order to give the reader a better insight in the meaning and magnitude of the many parameters relevant to dry etching electrical engineering concepts are emphasized to explain the pros and cons of reactor concepts and excitation frequency ranges in the description of practical applications extensive use is made of cross referencing between processes and materials as well as theory and practice it is thus intended to provide a total model for understanding dry etching the book has been written such that no previous knowledge of the subject is required it is intended as a review of all aspects of dry etching for silicon semiconductor processing the book describes various points important points and rules etc to be taken care while commissioning a new hospital it will help all who are going to set up a new hospital and even to existing hospitals singapore s leading tech magazine gives its readers the
