Emergency Response Guidebook 2000

This guide presents comprehensive step-by-step guidance on assessing hazardous materials emergency response needs at state, regional, and local levels, matching state, regional, and local capabilities with potential emergencies involving different types of hazardous materials and assessing how quickly resources can be brought to bear in an emergency. The methodology described in the guide is designed to be scalable, allowing the implementation results to be aggregated at the local level up through regional, state, and national levels. Also, the guide is designed to connect as many components as possible to already established standards, guidelines, regulations, and laws so that the guide will remain current as these underlying components are updated. In addition, the guide discusses appropriate means for maintaining currency of the information over time. The guide and accompanying spreadsheet tool on the attached CD-ROM, which leads planners through the assessment process, will be most useful for local jurisdictions that have limited resources and expertise in hazardous materials emergency response planning. *Publisher's description*
