FCC Record 1996 includes part 1 number 1 books and pamphlets including serials and contributions to periodicals january june
Annual Report of the Commissioner of Indian Affairs to the Secretary of the Interior for the Fiscal Year Ended ... 1899 first published in 1998 the growth of home ownership since the end of the second world war marks one of the most fundamental social changes to have

taken place in britain from being a nation of renters at the end of war britain has been converted into a nation of home owners in 1945 approximately 25 of households in britain owned their own homes today the proportion is just over two thirds in the process the proportion of households renting from private landlords has fallen from 65 to about 8 as a result the home ownership market in britain plays a far more important role today than hitherto both in housing the population and as a potential source of capital gains and losses in addition the home ownership market plays a significant role in the overall health of the economy this is not to deny the importance of social and private rented housing or the major problems of homelessness it is simply to assert that the home ownership market now affects two out of three households in britain and many more who wish to gain access to it this book is about the dramatic booms and busts of the home ownership market in britain during the last twenty years and their causes and consequences both for the individuals involved and for the economy as a whole it argues that the home ownership market in britain particularly in southern britain where the booms and slumps have been experienced most sharply has been akin to a casino there have been big winners but there have also been big losers the last thirty years have been a roller coaster ride for owners exhilarating but potentially highly dangerous not least for those who fell off or were thrown off in the slump of the early 1990s

Index to U.S. EPA Test Methods 1996 the book presents the select proceedings of the international conference on recent advances in sustainable environment raise 2022 it discusses recent challenges and advances in various areas of sustainable environment the topics covered include environmental dynamics atmospheric physics physical oceanography global environmental change ecosystems management climate climatic changes global warming ozone layer depletion carbon capture storage integrated ecosystems management satellite applications in the environment environmental restoration ecological engineering habitat reconstruction biodiversity conservation deforestation landscape degradation restoration ground water remediation soil decontamination environmental sustainability renewable sources of energy clean technologies toxicity assessment epidemiological studies indoor air pollution etc this book will be useful for the researches academicians scientists and professionals working in the various areas of environment sustainability especially sustainable civil engineering
