Phytoremediation

2008-02-05

this book presents the most innovative recent methodological developments in phytoremediation research and outlines a variety of the contexts in which phytoremediation has begun to be applied a significant portion is devoted to groundbreaking methods for the production of plants that are able to degrade take up or tolerate the effects of pollutants the book adopts a multidisciplinary approach to the examination of principles and practices of phytoremediation

Chemometrics and Data Analysis in Chromatography

2019-03-20

chromatography approaches are widely used in various life science applications since its invention by the russian botanist mikhail s tsvet in 1901 chromatography has increasingly developed into an invaluable laboratory tool for the separation and identification of chemical components it outperforms older techniques such as crystallization solvent extraction and distillation by offering unequaled resolving power and the possibility of lowering detection limits to below nanogram levels to further improve chromatographic methods however the use of chemometrics is advisable as an economical alternative to resolve any problematic situations in analysis this book intends to provide the readers with an up to date application of chemometrics and data analysis to different types of chromatographic methods

Polyurethane

2012-08-29

the enchanting and worthy world of pu beckoned to bring forth the book titled polyurethane the book is divided into three sections structures properties and characterization of pu applications of pu and a separate section on biobased pu covering the research and development in these areas each contributed chapter handles new and interesting topics introducing the reader to the wider known and unknown applications of pu such as pu for grouting technologies fuel binder extraction of metals treatment of industry wastewater alkanolamide pu coatings and foams and others the book aims to cater a larger audience comprising of readers from polymer chemistry materials chemistry and industrial chemistry

The Determination of Chemical Elements in Food

2007-08-31

state of the art tools and applications for food safety and food science research atomic spectroscopy and mass spectrometry are important tools for identifying and quantifying trace elements in food products elements that may be potentially beneficial or potentially toxic the determination of chemical elements in food applications for atomic and mass spectrometry teaches the reader how to use these advanced technologies for food analysis with chapters written by internationally renowned scientists it provides a detailed overview of progress in the field and the latest innovations in instrumentation and techniques covering fundamentals and method development selected applications and speciation analysis applications of atomic absorption spectrometry inductively coupled plasma atomic emission spectrometry and inductively coupled plasma mass spectrometry applications to foods of animal origin and applications to foods of vegetable origin foreseeable developments of instrumental spectrometric techniques that can be exploited to better protect consumers health with a full account of the most promising trends in spectrometric instrumentation and ancillary apparatuses applicable laws and regulations at the national and international levels this is a core reference for scientists in food laboratories in the public and private sectors and academia as well as members of regulatory bodies that deal with food safety

Cycling of Phosphorus and Manganese in the Arabian Sea During the Late Quaternary

1999

bioceramics 13 contains the proceedings of the 13th international symposium on ceramics in medicine organized by the international society for ceramics in medicine this society is an established forum for distinguished material scientists bioengineers molecular and cellular biologists bone biologists orthopedic surgeons clinicians and manufacturers to gather together and discuss the latest achievements in the field of bioceramic materials

Geologica Ultraiectina

1957

papers characterization of inducible nitric oxide synthase expression in human airway epithelium nitric oxide and its congeners in mitochondria role of nitric oxide in inflammation and tissue injury during endotoxemia and hemorrhagic shock nitric oxide and peroxynitrite production in ocular inflammation 5 papers on pulmonary pollutant effects 6 papers on oxidants and signal transduction including impact of oxidative stress on signal transduction control by phosphotyrosine phosphatases the nature of antioxidant defense mechanisms lipid peroxidation products and antioxidants in human disease and lung injury and oxidoreductases

Fluxes, Diagenesis and Preservation of Recent and Holocene Sediments in the Eastern Mediterranean

2001

estuaries are productive ecosystems of high ecological value they are important habitats for various species and those of highest value are protected by national and international conventions this book highlights possible pollution impacts in a protected estuarine ecosystem amvrakikos gulf considered as one of the most important wetlands in greece in addition the changjiang yangtze river is known to contribute significantly to the ecosystems of the changjiang river estuary and adjacent waters in this book some long term data of freshwater discharge sediment load nutrient concentrations and compositions in the river and estuary waters are presented as well as the long term response of the ecosystem in the estuary moreover the literature on modern estuarine diatoms from argentina is revised in order to synthesise the available

ecological information and to detect possible modern analogues for quaternary diatom assemblages the authors also discuss negative or inverse estuaries those where seawater is concentrated by the removal of fresh water in the northern gulf of california the challenges facing the sustainable management of temporarily open closed estuaries tocs is addressed as well critical in some cases because their ecological integrity biodiversity and nursery function have already been compromised

Proceedings of the Ocean Drilling Program

1995

molecular markers are substances that serve as source indicators and process probes this comprehensive collection examines the use of molecular markers in environmental geochemistry it presents recent research on three classes of markers contemporary biogenic markers fossil biomarkers and anthropogenic markers

Geochemistry of Eastern Mediterranean Sedimentary Cycles

1999

all 50 states as well as canada and mexico are covered in this full colour atlas

Water Services

1992

Water services are essential for human health and economic development. This book provides a comprehensive overview of water services, including water supply, distribution, and treatment. It covers the challenges of water scarcity and the need for sustainable water management. The book also discusses the role of water services in public health and environmental protection. It is a valuable resource for policymakers, water service providers, and researchers.

Environmental Toxicology and Chemistry

2006

vols for 1970 71 includes manufacturers catalogs
