children's learning and understanding of science during their pre school years has been a neglected topic in the education literature something this volume aims to redress paradigmatic notions of science education with their focus on biologically governed development and age specific accession to scientific concepts have perpetuated this state of affairs this book offers a very different perspective however it has its roots in the work of cultural historical activity theorists who since vygotsky have assumed that any higher cognitive function existed in and as a social relation first accepting this precept removes any lower limit we may deem appropriate on children's cognitive engagement with science related concepts the authors describe and analyze the ways in which children aged from one to five grapple with scientific concepts and also suggest ways in which pre service and in service teachers can be prepared to teach in ways that support children's development in cultural and historical contexts in doing so the book affirms the value of cultural historical activity theory as an appropriate framework for analyzing preschool children's participation in science learning experiences and shows that that the theory provides an appropriate framework for understanding learning as well as for planning and conducting training for pre school teachers

earlier theses on the history of childhood can now be laid to rest and a fundamental paradigm shift initiated as there is an overwhelming body of evidence to show that in medieval and early modern times too there were close emotional relations between parents and children the contributors to this volume demonstrate conclusively on the one hand how intensively parents concerned themselves with their children in the pre modern era and on the other which social political and religious conditions shaped these relationships these studies in emotional history demonstrate how easy it is for a subjective choice of sources coupled with faulty interpretations caused mainly by modern prejudices toward the middle ages in particular to lead to the view that in the past children were regarded as small adults the contributors demonstrate convincingly that intense feelings admittedly often different in nature were shared between adults and mentally retarded children
