

Free ebook Writing a formal observation paper on child (Download Only)

observation is the most pervasive and fundamental practice of all the modern sciences both natural and human its instruments include not only the naked senses but also tools such as the telescope and microscope the questionnaire the photographic plate the notebook the glassed in beehive and myriad other ingenious inventions designed to make the invisible visible the evanescent permanent the abstract concrete yet observation has almost never been considered as an object of historical inquiry in itself this wide ranging collection offers the first examination of the history of scientific observation in its own right as both epistemic category and scientific practice histories of scientific observation features engaging episodes drawn from across the spectrum of the natural and human sciences ranging from meteorology medicine and natural history to economics astronomy and psychology the contributions spotlight how observers have scrutinized everything from seaweed to x ray radiation household budgets to the emotions with ingenuity curiosity and perseverance verging on obsession this book makes a compelling case for the significance of the long surprising and epistemologically significant history of scientific observation a history full of innovations that have enlarged the possibilities

of perception judgment and reason infant observation carried out within the family is a compelling approach to the study of early human development vividly revealing the impact of intergenerational patterns of child rearing and the complex relationship between nature and nurture it provides unique insights into the early origins of emotional disturbance and suggests ways in which healthy development can be promoted by both professional and parent often resulting in changes to clinical practice developments in infant observation the tavistock model is a collection of twelve key papers from international contributors it offers an overview of current practice explores the new concepts that have arisen from direct observation and shows how the findings from observation are being applied in the research setting an essential text for child psychotherapists in training and practice this is a book that brings alive the academic theories of child development through thought provoking and stimulating case studies which will be of interest to any professional working with children manuel perez sanchez has presented a very vivid description of a baby s first year of life direct observational material is lent understanding through the combination of his and esther bick s thoughts regarding the weekly infant observations we read how the baby progresses from a state of unintegration in which the anxious baby requires the containing presence of the parents and uses primitive bodily methods of providing protection against anxiety in their absence we then move to a more comfortable stage in which the baby models

introjected the parents as providing a sense of internal security we see how each step in the baby's development involves a reciprocal change in the parents relationship to the baby surviving space is a collection of papers on infant observation and related issues by contemporary experts in the field commemorating the centenary of esther bick and the unique contribution she has made to psychoanalytic theory as part of the prestigious tavistock clinic series this is an essential addition to this highly valued and innovative series infant observation is crucial to most psychotherapy training and this work would be of obvious value to those commencing their training as well as valuable insights for all

psychotherapists the sun is the brightest and most accessible object in the sky and it has much to offer the amateur astronomer with modest equipment on most days it shows sunspots and other features that display a wealth of fine detail and change their appearance strikingly from day to day but observing the sun can be dangerous never look at the sun through a telescope or other optical aid even for a brief instant the sun's intense radiation amplified and focused by a telescope will almost certainly cause eye injury and could well lead to complete blindness do not attempt any solar observing until you have read and understood the safety precautions and observing advice set out in chapter 2 of this book even if you think you have the correct equipment be especially wary about using filters to observe the sun if you have a filter that makes the sun look dark crystals are not necessarily safe as it is largely the sun's model m440
