the synthesizer generator is a system for automating the implementation of language based editing environments the editor designer prepares a specification that includes rules defining a language s context free abstract syn tax context sensitive relationships display format and concrete input syntax from this specification the synthesizer generator creates a display editor for manipulating objects according to these rules reps84 this volume the synthesizer generator reference manual is intended as the defining document of the system a companion volume the synthesizer gen erator a system for constructing language based editors reps88 provides a more tutorial description of the system it contains numerous examples that illustrate the specification and use of generated editors as well as chapters that explain important

algorithms of the implementation the synthesizer generator is a generalization of our earlier system the cornell program synthesizer teitelbaum81 which was a programming environment for a specific small dialect of pl i it featured a display oriented syntax directed editor an incremental compiler an execution supervisor supporting source level debugging and a file system containing syntactically typed program fragments whereas pl i was built into the cornell program synthesizer the synthesizer generator accepts a formal language definition as input although originally conceived as a tool for creating synthesizer like environments for arbitrary programming languages the synthesizer generator is more broadly useful any textual language with a hierarchical phrase structure grammar is a candidate vi preface interactive theorem proving for formal mathematics and logic for example has emerged as a particularly suitable application
